Valeriy,

I am calling NRC next. But here is the info you requested.

The current containment (which is the trench that was being dug at the time of the strike) is 575' long by 7' wide by 5' deep. We estimated 0.25 inches of oil on water from the release which is approximately 632 gallons (~15 barrels). 90%+ of that oil has already been recovered. Additional recovery is occurring now. We are mobilizing frac tanks to the site and building a lined containment to excavate impacted water/soil from the trench.

The coordinates of the release are attached in the screen shot from the GPS.

JP

Please be cautious: KPK External Sender Notice: This email is from an external sender. Please take care when clicking links or opening attachments. When in doubt, contact your IT Department

John,

Looks like I forgot a number for the National Response Center, **800-424-8802** is the correct number.

Based on the information received, we will be sending an On-Scene Coordinator to take a quick look, his name is David Romero (cc'd), contact is 303-884-1236.

Thank you.

Valeriy Bizyayev
Federal On-Scene Coordinator
U.S. EPA Region VIII Emergency Response
O: 303-312-6621
C: 720-682-2288

To report an oil spill or chemical release please contact the **National Response Center at 800-424-8802** or the **Region VIII Duty On-Scene Coordinator at 303-293-1788**.

Subject: Flow-Line Break, Fort Lupton
Importance: High

Hi John,

We received a report that there was a flow line break of a KPK line in Fort Lupton, CO. I wanted to confirm and get some information of the spill. Please provide a report as soon as possible. Additionally, please provide notification to the National Response Center (800-424-8802), as the report we received indicated a proximity to water. Please call with questions. Thank you.
